SUMMARY

Back-end developer in progress, studying Computer Engineering at Unaerp. I build APIs, model data and ship systems to production, from database to interface. Current projects include a WhatsApp sales bot with a real store catalogue, an import-management SaaS with payments and a dashboard that automates job search and applications. I care about readable code, tests and the parts that must work when nobody is watching.

EXPERIENCE

Full Stack Developer — Freelance

2025 - Present

Kamikaze Sports · Ribeirão Preto, Brazil

- Built a WhatsApp sales system with a catalogue synced to the store: 219 products and 568 variants.
- Modelled the SQLite database with many-to-many categories, stock control and revalidation when the order is closed.
- Shipped an operations panel with inbox, Kanban, metrics, backup and message retention.
- Covered the flow with 63 automated tests (orders, stock, categories and catalogue).

Founder and Developer

2025 - Present

StartANewDay · Remote

- Created a local dashboard that searches jobs across 4 public sources, scores fit against the profile and organises applications.
- Integrated GitHub, LinkedIn and the 4 job sources through Playwright browser automation.
- Designed the data flow, the Node.js/Express API and the React interface.
- Reused the same engine on the public jobs page of this portfolio, with 41 jobs in the latest sync.

Full Stack Developer

2025 - Present

ImportFlow · Remote

- Developed an import-management SaaS with React, TypeScript and Supabase.
- Integrated 2 payment gateways — Stripe (card, Pix and boleto) and InfinitePay — with signed webhooks and payment reconciliation.
- Implemented authentication, an admin panel, user provisioning and sales notifications on Discord.
- Structured Edge Functions, access policies and a development environment seeded with test data.

EDUCATION

B.Sc. in Computer Engineering

In progress

Unaerp — University of Ribeirão Preto

Coursework in algorithms, data structures, operating systems, networks and software engineering.

SELECTED PROJECTS

Kamikaze Bot

WhatsApp sales system for a martial-arts store: live catalogue, stock, orders and an operations panel.

`TypeScript, Node.js, Baileys, Hono, SQLite, Playwright, Docker`

ImportFlow

Import-management SaaS with Stripe checkout, Pix, webhooks and an admin panel.

`React, TypeScript, Supabase, Stripe, Edge Functions`

StartANewDay

Career dashboard that searches jobs, scores profile fit and organises applications.

`Node.js, Express, React, Playwright, IA`

Arquivo — vitrine Pokémon

Static showcase of 26 cards with a local panel, listing automation and Vercel deploy.

`HTML, CSS, JavaScript, Chrome DevTools Protocol`

badgesPlus

Vencord plugin that adds custom badges and profile caching to Discord.

`TypeScript, React, Vencord API`

SKILLS

BACK-END	LANGUAGE	DATABASE
Node.js · Express · Spring Boot · REST APIs · Supabase	TypeScript · JavaScript · Go · Java · Python	PostgreSQL · SQL · SQLite
DEVOPS	**FRONT-END**	**QUALITY**
Docker · Git and GitHub Actions · Linux · Vercel	React	Automated testing · Playwright

LANGUAGES

Portuguese Native

English Intermediate — advanced technical reading
